# JOY Stool

## Overview

Joy seamlessly merges comfort and aesthetics, striking the perfect balance between agility while maintaining a keen designer focus. Joy adds a touch of contemporary style to both home and corporate environments, as well as any communal spaces designed for relaxation including break areas, meeting spots and lounge settings.

This versatile stool is available in two distinct heights and showcases a robust yet lightweight natural beech timber frame, that supports a plush, moulded seat foam. It serves as the ideal canvas for customisation, upholstered locally in your preferred fabric allowing you to make it uniquely yours.

## Features

- Available in two sizes: Joy Low, with a height of 480 mm, and Joy High, with a height of 770 mm.
- The Joy high stool includes a foot-rest ring that complements the under-seat. Available in stock in the Dark Grey only.

## Materials

- Natural Beech Timber
- Plastic Footrest
- Plastic Under-seat
- Moulded Seat Foam
- Fabric Upholstery

## Choosing your stool

Stools come in a range of sizes and types to respond to a variety of functions and uses. When choosing a stool, height and measurements are key factors that should be considered to ensure that the furniture is comfortable and functional. Below, we will detail the steps to follow to choose the right height and measurements of a stool.

### Location

Before choosing the height and measurements of the stool, you must determine in what area of the home or office it will be used and for what specific purpose.

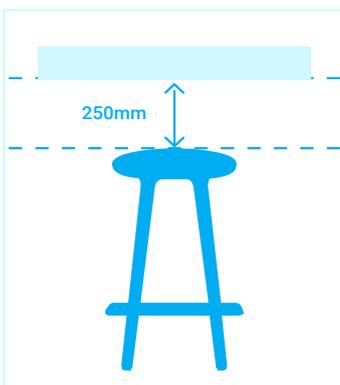

### Measurements to take

To find a stool that is the perfect match, you will need to measure the **height of the surface**, the **height of the stool** and the **length of the surface**.

To accurately determine your counter or desk's height, **measure from the floor to the underside of the surface**. The surface refers to the top of the table, bar, desk or counter.

If you intend to add multiple stools to your kitchen, dining room or desk surface, you will need to account for the width of each stool. This is where your **measurement of the surface length** will come in handy!

### Space between top of stool

A minimum of 250mm should be measured and provided between the top of stool seat and the underside of any desk or counter to provide adequate and comfortable space for the user legs.

**Frame**  
 Polished Beech
